

Abstract of the Disclosure

The invention relates to a lamp base having fastening means for a lamp vessel, having a base part that consists of an electrically insulating material and
5 that is equipped with at least two first electric contacts that serve the power supply of at least one luminous means, wherein said base part has at least two second electric contacts, in each case one of said second electric contacts being connected in an
10 electrically conducting fashion to in each case one of said first electric contacts.
